Education

University of California, Irvine — Irvine, CA

Bachelor of Science in Computer Science — *September 2023 – December 2027*

- **Relevant Coursework:** Data Structures and Algorithms, Object Oriented Programming, Discrete Mathematics, Linear Algebra, Machine Learning

Experience

Break Through Tech AI Studio Fellow — Aug 2026 – Present

Walmart Connect — *Remote*

- Engineered a causal ML pipeline, as measured by processing 1M records, by developing a Python workflow.
- Eliminated post-selection bias, as measured by evaluating 46,939 campaign outcomes, by implementing Scikit-Learn regression models.
- Optimized targeting algorithm, as measured by 95% confidence uplift on 150,000 records, by benchmarking 4 strategies.
- Formulated privacy-conscious rules, as measured by statistically significant uplift, by engineering Qini curves for executive reporting.

Archv AI — December 2025 – June 2026

Software Engineering Intern — *Irvine, CA*

- Advanced compliance retrieval, as measured by an 18% latency reduction, by engineering RAG pipelines with dynamic chunking.
- Scaled data extraction, as measured by 35% higher throughput, by engineering full-stack features and async APIs.
- Hardened tenant data security, as measured by 100% compliance tracking, by integrating RBAC and tamper-evident logging.
- Optimized frontend performance, as measured by a 15% load time reduction, by refactoring React components.

Projects Chair — January 2026 – Present

AI @ UCI — *Irvine, CA*

- Secured $5,000+ in funding, representing a 40% YoY budget increase, by pitching AI @ UCI's value proposition to 20+ tech firms during targeted outreach.
- Directed a campus-wide AI hackathon that drew 300+ participants and 45 project submissions by managing logistics and industry judges with a 5-person committee.
- Led technical development for 10 student teams, achieving a 90% project completion rate, by establishing a 10-week pipeline and industry mentorship.

Projects

V-etch: Virtualized AI Inference Platform | *Senior Design* — September 2026 - Present

- Built a Kubernetes operator that scales virtual inference nodes, as measured by 10 envtest specs covering scaling, idempotency, and ownership safety, by writing an idempotent Go reconciler.
- Designed a declarative API for VM-backed inference clusters, as measured by 8 spec fields and 13 validation rules, by extending a Kubebuilder CRD.
- Prevented overwrites of unowned ConfigMaps, as measured by 1 envtest spec, by enforcing OwnerReference checks

Nimbus | *AWS cloudhacks 2026 – Amazon Sponsored* — March 2026

- Architected a carbon-aware serverless platform using React, FastAPI, AWS Lambda, DynamoDB, and Bedrock to auto-scale batch workloads based on real-time grid emissions.
- Reduced potential carbon footprint by 180+ tonnes CO_2/year at 10,000 vCPU scale with 100% Infrastructure-as-Code (IaC) deployment.

Technical Skills

Languages: Python, Go, C/C++, Verilog, Java, JavaScript, TypeScript, HTML, CSS, Kotlin, SQL, Shell scripting
Developer Tools: Git, VS Code, IntelliJ, Arduino IDE, Uvicorn, Swagger UI, Figma, Docker, Kubernetes
Technologies/Frameworks: AI/ML, LLM, FastAPI, React, Next.js, Tailwind CSS, PostgreSQL, AWS, GitHub, Supabase, RestAPIs, Kubebuilder, controller-runtime, Kubernetes Operators (CRDs)
Other: Fluent in Vietnamese
